SUMMARY

Full-stack developer with hands-on experience delivering production features at a product startup. Specialises in React, Next.js, TypeScript, and Node.js — with a strong track record across drag-and-drop interfaces, interactive data tables, and end-to-end CRUD applications. Comfortable owning a feature from REST API design to pixel-level UI.

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Redux Toolkit

Backend: Node.js, Express.js, MongoDB, REST APIs, NextAuth

UI & Data: TanStack Table, React DnD, react-beautiful-dnd, Recharts, react-chartjs-2

Tools: Git, GitHub, Vercel, Render, Vite

WORK EXPERIENCE

Splixcube | **Frontend Developer** | Apr 2023 – Sep 2023

- Engineered a drag-and-drop dashboard for 3 configurable panels — each housing tables, forms, and custom components — using React DnD; collaborated on library selection and delivered the feature independently.
- Designed reusable data table and chart components (TanStack Table + react-chartjs-2) with client-side pagination, enabling smooth handling of large datasets without UI degradation.

AltCampus | **Software Developer Trainee** | Jan 2022 – Mar 2023

- Completed an intensive full-stack programme building production-style React, Node.js, Express, and MongoDB applications — with emphasis on real-world development workflows.
- Architected and integrated RESTful APIs across multiple solo projects, covering authentication, data modelling, and complete client-server communication.
- Practised collaborative debugging with peers and maintained disciplined version control using Git and GitHub throughout all project deliveries.

| **Independent Study & Projects** | Oct 2023 – Present

- Continuously building and shipping personal projects in Next.js, TypeScript, React, and Node.js to deepen full-stack expertise — see Projects section below.

PROJECTS

Expense Tracker — Next.js · TypeScript · MongoDB · Tailwind CSS · TanStack Table · Recharts

- Architected a full-stack expense tracking app with Next.js Server Actions for all CRUD operations, eliminating a separate API layer and reducing client-server round-trips.
- Delivered rich financial visualisations using Recharts — area chart for income/expense trends and a horizontal bar chart for category breakdown — giving users immediate spending insight.
- Built a sortable, searchable, paginated transaction table with TanStack Table, keeping the UI responsive across large transaction histories.
- Implemented NextAuth authentication alongside category archiving to support multi-user access and long-term data organisation.

Kanban Board — React · Express · MongoDB · Tailwind CSS · Redux Toolkit

- Developed a full-stack task management app featuring JWT auth, complete CRUD for boards/columns/tasks/subtasks, and Redux Toolkit for predictable global state.
- Implemented cross-column drag-and-drop task reordering with React DnD, persisting every move to MongoDB to ensure state is never lost on refresh.
- Added polished UX details — dark/light theme switching and a collapsible sidebar — aligning the product with modern dashboard conventions.

EDUCATION

Bachelor of Technology — Career Point University *Aug 2016 – Aug 2020*

WRITING

- Beginner's Guide to Git and GitHub — version control fundamentals and team workflows.
- Understanding JavaScript Execution Context — deep dive into scope and execution behaviour.
- Create a Basic HTTP Server Using Node.js — step-by-step guide to building a backend server from scratch.
