SUMMARY

Full-stack developer with hands-on experience delivering production features at a product startup. Specialises in React, Next.js, TypeScript, and Node.js — with a strong track record across drag-and-drop interfaces, interactive data tables, and end-to-end CRUD applications. Comfortable owning a feature from REST API design to pixel-level UI.

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Redux Toolkit

Backend: Node.js, Express.js, MongoDB, REST APIs, Next Auth

UI & Data Handling: TanStack Table, React DnD, react-beautiful-dnd, Recharts, react-chartjs-2

Tools: Git, GitHub, Vercel, Render, Vite

WORK EXPERIENCE

Independent Study & Project Development

Oct 2023 – Present

- Building personal projects using **Next.js**, **TypeScript**, **React**, and **Node.js** — including an expense tracker and a Kanban board application. Actively expanding skills in full-stack development.

Splixcube

Apr 2023 – Sep 2023

Frontend Developer

- Built a **drag-and-drop** interface for 3 configurable dashboard panels using **React DnD** — each containing tables, forms, and custom UI components — collaborated with a second engineer to align on library approach and delivered the feature independently.
- Built reusable data table and pie/donut chart components using **TanStack Table** and **react-chartjs-2**, with **client-side pagination** to handle large datasets without overwhelming the UI.

AltCampus

Jan 2022 – Mar 2023

Software Developer Trainee

- Completed an intensive full-stack training program, building **React**, **Node.js**, **Express**, and **MongoDB** applications from scratch with a focus on real-world workflows.
- Developed and integrated **RESTful APIs** across multiple solo projects, handling authentication, data modeling, and client-server communication end-to-end.
- Collaborated informally with peers to debug and problem-solve, using **Git** and **GitHub** throughout for version control and project delivery.

PROJECTS

Expense Tracker | GitHub | Demo

Next.js, TypeScript, MongoDB, Tailwind CSS, TanStack Table, Recharts

- Built a full-stack expense tracking app using **Next.js** and **TypeScript**, with **MongoDB** for data persistence and **Next Auth** for authentication.
- Implemented transaction management with add/edit/delete, category archiving, and **Server Actions** for all CRUD operations — eliminating the need for a separate API layer.
- Built an interactive data table using **TanStack Table** with search, sorting by date and amount, and pagination to handle large transaction histories.
- Visualised financial data using **Recharts** — including an area chart for income/expense trends and a horizontal bar chart for expense breakdown by category.

Kanban Board | GitHub | Demo

React, Express, MongoDB, Tailwind CSS

- Built a full-stack task management app with **JWT authentication**, **Redux Toolkit** for state management, and full CRUD for boards, columns, tasks, and subtasks.
- Implemented **drag-and-drop** task reordering across columns using **React DnD**, with persistent state synced to **MongoDB** on every move.
- Added UI features, including **theme switching** and a **collapsible sidebar** to improve usability and match modern dashboard conventions.

EDUCATION

Bachelor of Technology

Career Point University

Aug 2016 – Aug 2020
